More NJ Homes Getting Sprinklers

Thursday, April 17, 2008 - Millennium Radio

For years, New Jersey businesses have used sprinkler systems to protect themselves from fires. Lately a growing number of residents have been deciding to equip their private homes with similar devices.

Vinnie Fichera of the New Jersey Fire Sprinkler Advisory Board says the devices help fight fires in areas that cause the most fire fatalities each year. "The biggest problem we have in the fire field is really residential fires. They claim the lives of over three thousand Americans per year," said Fichera.

Fichera hopes New Jersey will alter its building regulations to get more sprinkler systems in homes. He's trying to show builders that sprinkler systems now exist that are unobtrusive and do not alter the aesthetics of homes.
